

1 · Context Confirmation

Full context confirmed. PMD_Session09_Summary_v1.0.pdf and PMD_SKILL.md v1.2 loaded. All Session 09 completions, six system additions, locked standards, and Session 10 agenda carried forward. Revenue Projects document reviewed from Google Drive. Bootcamp detail confirmed from upcoastleaders.ca. Analysis below covers all five task items.

Field	Value
System name	PMD
Pseudonym	PM Dev — personal use only, never public
Identity statement	Where brilliant ideas become shipped products.
Live URL	https://thepmdev.com/
P0 status	Complete. All 9 phases. All 16 artifacts approved. WCAG 2.2 AA confirmed.
Artifacts to date	26 artifacts — #23 through #26 produced Session 09
Confidence score	1.0 / 10 — honest, no new project shipped yet
Session date	May 2026

2 · A&M; / PM Dev Relationship — Critique

The Acumen & Merit / PM Dev arrangement looks synergistic on the surface: PM Dev receives real-world projects to build skill and portfolio material; A&M; receives product development labor with no payroll cost. However, several structural issues will become troublesome if not addressed explicitly and early.

Issue	Detail	Risk Level
Pro bono without scope control	A&M; can expand scope freely at zero cost. Without a written engagement agreement defining project scope, deliverables, and revision limits, PM Dev absorbs unlimited rework at zero compensation. This is the single highest-probability failure mode.	HIGH
Portfolio classification authority	PMD System classifies projects as Learning or Portfolio. A&M; has no standing to reclassify a project. If A&M; decides a half-built product is "not ready" or redirects PM Dev mid-build, PM Dev may end up with an incomplete portfolio artifact and no recourse. Classification authority must stay with PMD.	HIGH
WCAG and quality standards	PMD mandates WCAG 2.2 Level AA — non-negotiable. A&M; as a client may push to ship faster, bypassing accessibility. A written standard that applies to all A&M; builds must be agreed upfront, not negotiated project-by-project.	MEDIUM

Skill sequencing mismatch	A&M;'s revenue projects span a wide complexity range. If A&M; assigns a Medium-High or High complexity project before PM Dev's PMD roadmap has built the prerequisite skills, the result will be a low-quality build that undermines both the portfolio and A&M;'s product. Sequencing authority stays with PMD.	MEDIUM
Competing time demands	P1 Kickoff, the bootcamp (June 1 – July 6), and A&M; project work will run simultaneously. Without explicit time-boxing, A&M; work will crowd out PMD System skill-building. PMD roadmap progress must not be subordinated to A&M; delivery timelines.	MEDIUM
Equity / compensation ambiguity	A&M; is described as a VC firm that builds and invests in portfolio companies. If PM Dev builds revenue-generating products at no cost and those products succeed, PM Dev receives no financial upside beyond portfolio credit. This is acceptable as a temporary arrangement for portfolio-building, but should have a defined sunset — e.g., after W2 employment is secured or after a fixed number of projects.	MEDIUM
Public attribution	PMD artifacts and project work will be featured on thepmddev.com. A&M; must explicitly agree in writing that PM Dev may publicly showcase all work built for A&M; portfolio companies, including design artifacts, process documentation, and the shipped products themselves.	MEDIUM
Brand separation	PM Dev is a public-facing pseudonym targeting hiring evaluators. A&M; is a professional services firm. The two brands must remain visually and narratively separate. PM Dev's content and portfolio must never appear to be A&M; marketing material — and vice versa.	LOW

Recommended action before P1: establish a one-page written engagement framework — not a legal contract, but a clear mutual understanding — that defines: (1) scope-change protocol, (2) PMD classification authority, (3) WCAG standard, (4) public attribution rights, (5) time allocation per week, and (6) arrangement sunset condition.

3 · Revenue Project Analysis — Individual Critiques

Each project assessed against: execution feasibility for a solopreneur with no shipped product history, timeline realism, revenue potential accuracy, unforeseen complexities, and additional considerations. Assessments are direct. Optimism that is not earned is waste.

Codename	Priority	Tech Complexity	Time to Revenue	Revenue Potential	Feasibility Score
Project Pivot Point	High	Medium-Low	Fast < 6 months	Moderate < \$1M	7 / 10

Pushback / Concern	Detail
Market saturation is severe	Resume.io, Kickresume, Teal, Rezi, Enhancv, and a dozen AI-native resume tools are live and funded. Competing on feature parity alone will not work. The differentiator must be precision — deep STAR-story elicitation and quantified bullet generation — not just 'AI-powered resume.' This must be named explicitly in the problem statement.
Time to revenue is optimistic	"Fast < 6 months" assumes rapid user acquisition, payment processing setup, ATS accuracy validation, and a conversion funnel. Realistically, 6 months gets you to a working MVP with a handful of beta users. Revenue beyond \$0 within 6 months requires an audience before launch — the bootcamp cohort is the only validated audience PM Dev currently has.
AI output quality is the product	The resume content quality IS the product. Poor AI output = zero retention, zero referrals, negative reviews. Fine-tuning prompts and validating output against real ATS systems is a non-trivial engineering and PM effort that is underrepresented in the current spec.
Account persistence and data security	User employment history, STAR stories, and job-specific data are sensitive PII. Account data architecture, encryption at rest, and a clear privacy policy are required before any user trusts this tool with their career history. These are not P1 concerns — they are launch prerequisites.

Additional Consideration	Detail
PMD System dogfooding	This project directly improves the PMD System's own resume artifact. Every architectural decision, every prompt structure, and every UX choice is simultaneously portfolio evidence and system improvement. Highest-value dogfooding of any project on the list.
Bootcamp cohort as customer-zero	The cohort is the built-in interview, persona, and beta test pool. This is a rare gift — a captive target audience available for weeks 1 and 2 research. Do not waste it. Run structured interviews in Week 1. Use the cohort Slack for validation.
Freemium entry point	A free tier — e.g., one resume per month — dramatically lowers acquisition friction in a market where users expect to try before paying. Monetize via quantity tiers or interview prep add-ons.
Build-in-public angle is strong	"I built the resume tool that got me hired" is a Tier-3 case study that writes itself. Start the content log from Day 1.

Coach verdict: Best choice for P1 and the bootcamp. Highest skill-to-revenue alignment, built-in user research cohort, dogfoods the PMD System, and produces a story every hiring evaluator will read. Address the market saturation angle in the Problem Statement or it will undermine the whole product.

Codename	Priority	Tech Complexity	Time to Revenue	Revenue Potential	Feasibility Score
Project TOYKs	Medium-High	Low	Moderate < 1 year	High > \$1M	4 / 10

Pushback / Concern	Detail
Physical product operations are a different business	This is not a software product — it is a print-on-demand business. Inventory, print partners, quality control, shipping logistics, and returns are operational concerns that have nothing to do with PM Dev's skill-building goals. The tech is low but the operational complexity is high and PM Dev has no relevant experience managing physical supply chains.
Revenue potential is aspirational	"High > \$1M lifetime revenue" assumes meaningful volume of \$80–200 books. The gift market is enormous but the addressable segment — couples willing to crowdsource romantic stories for a custom book — is niche and requires a long awareness funnel. Time to first revenue is likely 12–18 months, not < 1 year.
Content coordination is the product	The user flow requires coordinating submissions from a bridal party, parents, and random story contributors — none of whom PM Dev controls. The UX to collect, organize, and proof this content before print is significantly more complex than the table entry suggests.
Seasonality risk	Wedding gifting is heavily seasonal. Revenue will spike May–October and flatten November–April. Cash flow planning must account for this from the start.
Additional Consideration	Detail
Strong concept, wrong time	The emotional hook is real and differentiated. This is a valid P3 or P4 project once PM Dev has shipped a software product, managed user research, and understands e-commerce flows. At P1 with 1.0/10 confidence it is premature.
Print partnership first	Validating a print partner — pricing, minimum orders, quality — must happen in discovery, not after the product is built. The unit economics determine whether the entire model is viable.

Coach verdict: Compelling concept. Sequenced too early. Recommend deferring to P3–P4 after PM Dev has shipped at least two software products with paying users. The physical fulfillment component introduces operational complexity that is not appropriate for a first revenue project.

Codename	Priority	Tech Complexity	Time to Revenue	Revenue Potential	Feasibility Score
Project Isogram	High	Medium-High	Fast < 6 months	Moderate < \$1M	5 / 10

Pushback / Concern	Detail
Pay-per-game is the wrong model in 2026	Wordle, Connections, and every successful word/logic game in the current market are free. Users will not pay per game for a new, unproven game with no established player base. The revenue model must be rethought before this project begins — ad-supported free tier, premium cosmetics, or subscription are all more viable.
Multiplayer is Medium-High complexity, not Medium	Real-time or async multiplayer requires WebSockets or polling, state synchronization, session management, and anti-cheat logic. This is a significant engineering challenge for a developer with no shipped product history. An MVP should be single-player with async turn-by-turn before multiplayer is scoped.
Network effect dependency	Multiplayer games require players to have opponents. Without a player base, the core experience is broken. The cold-start problem for a multiplayer game is harder to solve than for a utility product.
Nothing proprietary	The project document itself acknowledges there is nothing proprietary. Without a novel mechanic, a strong brand, or a large existing audience, competing in the word-game market is an uphill battle.

Additional Consideration	Detail
Strong portfolio project classification	Despite revenue challenges, this is an excellent Learning or Portfolio project for demonstrating real-time game mechanics, user engagement design, and retention loop thinking. Classify as Portfolio — scoped as a single-player MVP.
Isogram mechanic is genuinely novel	The isogram constraint (no repeating letters) combined with Mastermind-style feedback is a differentiated mechanic worth exploring. The problem is the revenue model, not the game design.
Sequence after P2	Game mechanics, engagement design, and state management are P2+ skill territory. Building this at P1 will result in a technically weak product. Sequence after PM Dev has shipped one utility product.

Coach verdict: Good portfolio project, premature revenue project. Fix the revenue model before building. Sequence at P2 or P3. Scope MVP as single-player with async multiplayer in a later version.

Codename	Priority	Tech Complexity	Time to Revenue	Revenue Potential	Feasibility Score
Project Tip Jar	Medium	Low-Medium	Moderate < 1 year	Moderate < \$1M	3 / 10

Pushback / Concern	Detail
The friction model is the product's biggest liability	"Won't let you close a tab until you tip" is dark UX. This pattern will generate immediate backlash, browser extension blocks, and negative press. The popup-that-blocks-closing pattern is associated with malware, not legitimate products. This description needs a fundamental rethink before any building begins.
Two-sided marketplace from Day 1	Authors must be onboarded before readers have a reason to install the widget. Readers won't install without content. This is a classic cold-start two-sided marketplace problem — among the hardest product challenges to solve and completely inappropriate for a first revenue project.
Payment processing for micro-transactions is expensive	Processing \$0.05 tips via Stripe incurs per-transaction fees that exceed the transaction value. The \$9.00 minimum payout threshold helps but does not solve the unit economics. Stripe's minimum fee structure and monthly active user volume required to reach profitability needs explicit modeling before building.
Browser extension distribution is high friction	Chrome Web Store review times, policy compliance, and user install friction are underestimated. A browser extension is not a web app — it is a separate distribution channel with its own review process.

Additional Consideration	Detail
The concept has merit — the UX does not	Voluntary tipping for quality content is a real behavioral pattern (see: Buy Me A Coffee, Ko-fi, Patreon). The problem is the coercive mechanism. A redesign toward a voluntary, frictionless tip widget could work.
Bootcamp research opportunity exists	The two-sided market dynamic makes this an excellent bootcamp research project in isolation — author interviews on Week 2, reader empathy in Week 3. But bootcamp timeline is too short to validate both sides of the market fully.

Coach verdict: Not recommended as a P1 build. The UX pattern needs a complete redesign, the two-sided marketplace cold-start is a P3+ problem, and the unit economics require explicit modeling before any build begins. Valuable as a bootcamp research exercise. Not a near-term build.

Codename	Priority	Tech Complexity	Time to Revenue	Revenue Potential	Feasibility Score
Project DoH	Medium-Low	Medium	Moderate < 1 year	Low < \$100K	5 / 10

Pushback / Concern	Detail
Niche market ceiling is real	Hurling is a minority sport outside Ireland and the Irish diaspora. The North American addressable market is small enough that "Low < \$100K lifetime revenue" may itself be optimistic. The viable model here is not scale — it is deep niche dominance.
Club resistance to revenue sharing	The document explicitly flags that clubs do not want to revenue-share merchandise. This is not a future risk — it is a confirmed objection that must be resolved before the project begins. Without club buy-in, the merchandise revenue model collapses.
Real-time scoring is non-trivial	Live game scoring requires a reliable data-entry mechanism, latency tolerance, and a UX that works on a mobile device at a field with variable connectivity. This is a harder build than the Medium complexity rating suggests.

Additional Consideration	Detail
Genuine community need	Individual players wanting to compete in tournaments outside their home club is a real, unmet need. If the tournament signup mechanic is the core MVP — not the merchandise — this is a more focused and achievable scope.
Sequence at P2	Event management, payment processing for team signups, and real-time scoring are P2-appropriate skill targets. Sequence after one simpler utility product is shipped.

Coach verdict: Viable as a niche community product. Not a significant revenue generator. Scope the MVP to tournament signup only — prove the need before building the full platform. Sequence at P2. Resolve club buy-in before building the merchandise layer.

Codename	Priority	Tech Complexity	Time to Revenue	Revenue Potential	Feasibility Score
Project SSA	Low	Medium	Long > 1 year	High > \$1M	4 / 10

Pushback / Concern	Detail
B2B SaaS is the wrong starting point for a solo beginner	Corporate continuing education procurement requires procurement cycles, legal review, IT security sign-off, and executive buy-in. A solo PM/developer with no enterprise sales experience will not close corporate accounts at P1, P2, or likely P3.
Content volume is the existential problem	The document identifies insufficient content volume as a con. For a quiz platform, content is the product. Generating, curating, and maintaining high-quality, industry-specific quiz content across multiple verticals is a full-time content operation — not a side artifact of the build.
Not an approved CE source	If the target user is a CPA, attorney, or licensed professional, "not an approved CE source" means the core value proposition is unvalidated. Regulatory approval for continuing education credit is a multi-year, multi-jurisdiction effort.
Additional Consideration	Detail
PMD System mechanic is a seed	The reading retention quiz mechanism from the PMD Reading Tracker is a working proof of concept for the core mechanic. Leverage this as a demo artifact, not as product validation.
Sequence at P4+	The revenue model, content infrastructure, and B2B sales motion required here are appropriate for a developer with 3+ shipped products and growing industry credibility. Not a near-term project.

Coach verdict: High-ceiling concept. Completely wrong timing. Sequence at P4 minimum. The content and regulatory challenges require a co-founder or content partner — this is not a solopreneur solo-build at early stages.

Codename	Priority	Tech Complexity	Time to Revenue	Revenue Potential	Feasibility Score
Project QAM	Low	High	Long > 1 year	High > \$1M	2 / 10

Pushback / Concern	Detail
Enterprise API integration from Day 1	"API integrations available with existing POS and inventory management systems" assumes enterprise partnerships with retailers before launch. Retailers will not integrate an unproven solo-built product into their POS systems. This chicken-and-egg problem is not solvable at early stages.
High complexity is underrated	POS integration, real-time credit redemption, brand content management, and gamified quiz mechanics are each individually complex systems. Building all four simultaneously as a solo developer is not realistic.
The cons listed are fatal at early stage	"Quick fad, interest wanes over time" and "adds too much friction to the buying process" are product-level objections — not nice-to-haves to address later. These need to be disproven by user research before any code is written.
Additional Consideration	Detail
Concept has long-term viability	The insight — let users earn discounts by demonstrating brand knowledge rather than receiving blanket sales — is genuinely interesting at scale. This is a Series A startup idea, not a solo PM learning project.

Coach verdict: Highest complexity on the list. Not feasible as a solopreneur build at any stage in the near-term PMD roadmap. Maintain as a long-term concept. Do not sequence before P5.

Codename	Priority	Tech Complexity	Time to Revenue	Revenue Potential	Feasibility Score
Project Safehouse	Low	Medium-High	Long > 1 year	High > \$1M	4 / 10

Pushback / Concern	Detail
Pros and cons are listed as TBD	A project whose own pros and cons are undefined is not ready for sequencing. Before this project enters the roadmap at any priority level, a basic discovery pass — who is the user, what is the core daily-driver behavior, what data sources are required — is needed.
Data aggregation is the hard part	Home data — mortgage rates, property records, appliance maintenance schedules, permit histories — requires integrations with sources that are often municipal, proprietary, or inconsistently structured. The data layer is the product and it is underspecified entirely.
Subscription with delayed value	A homeowner's companion app must provide value from Day 1. Churn in subscription products with delayed gratification is high. The "equity accumulation to sale" lifecycle is 5–10 years. Daily or weekly engagement hooks must exist to retain users before that payoff.
Additional Consideration	Detail
Strong long-term concept	Home ownership lifecycle is a real pain point with a large addressable market. Properly scoped, this is a P4–P5 project that could anchor a portfolio milestone.
Discovery first, build later	Run user interviews with recent homebuyers before writing a single requirement. The pain points will be clearer and more specific than the current spec suggests.

Coach verdict: Solid long-term opportunity. Too underspecified for near-term sequencing. Sequence at P4. Complete a discovery pass before adding to the roadmap. The TBD pros and cons are a red flag — address them before committing.

Codename	Priority	Tech Complexity	Time to Revenue	Revenue Potential	Feasibility Score
Project Star Search	Low	Medium	Moderate ~ 1 year	Low < \$100K	3 / 10

Pushback / Concern	Detail
Audio ML is not Medium complexity	Accurate vocal analysis and artist/song matching requires trained audio ML models — likely a third-party API such as AudD or a custom model. The complexity rating underestimates the voice-matching accuracy challenge. Low accuracy = bad product = zero retention.
One-time use is a fatal flaw	The project document acknowledges this is a gimmick with one-time-use behavior. A product with no repeat engagement cannot sustain a paid model. Affiliate revenue from song purchases is a micro-margin business that requires enormous volume to matter.
Music affiliate margins are minimal	Apple Music and Spotify affiliate programs pay fractions of a cent per stream. Building a product whose primary revenue is affiliate pass-through requires millions of monthly active users to generate meaningful revenue.

Additional Consideration	Detail
Technically interesting portfolio artifact	Audio processing and ML integration would be compelling portfolio material demonstrating technical breadth. If classified as a Learning project, the revenue expectations become irrelevant.

Coach verdict: Not a viable revenue project. If built, classify as a Learning project to demonstrate audio/ML integration skills. Remove from the revenue project list — the model does not work. Sequence at P3–P4 as a Learning project only.

4 · A&M; Revenue Projects — Build Order Sequencing

Projects sequenced against five criteria: PMD roadmap alignment (skill readiness), original priority ranking, solopreneur feasibility assessment, time to revenue, and revenue potential. Roadmap positions reference the existing PMD Project Roadmap Architecture (Artifact #18 v2.1).

Build Order	Project	PMD Position	Rationale	Feasibility
1	Project Pivot Point (Resume Builder)	P1 — first project	Highest skill-roadmap fit at P0 complete. Tech complexity matches current capability. Bootcamp cohort provides built-in user research and beta audience. Dogfoods PMD System. Fastest path from zero to a product a real person will pay for. Problem is personal and validated.	HIGH
2	Project Isogram (Guessing Game)	P2 — after one utility product shipped	Game mechanics and real-time state management are P2 skill territory. Scope MVP as single-player only. Revenue model must be redesigned (free + cosmetics) before build begins. Strong portfolio artifact for engagement design skills.	MEDIUM
3	Project DoH (Duke of Hurl)	P2–P3 — after game project	Event management, payment processing for team signups, and community features are appropriate P2–P3 targets. Scope MVP to tournament signup only. Resolve club merchandise objection before building. Niche but achievable.	MEDIUM
4	Project Tip Jar (Article Tip Jar)	P3 — after two-sided market skills established	Redesign required before building (remove coercive UX). Two-sided marketplace mechanics are P3 skill territory. Unit economics must be modeled before scoping. Moved from Medium priority to P3 due to fundamental UX and model issues.	MEDIUM (post-redesign)
5	Project TOYKs (The One You Keep)	P3–P4 — after e-commerce skills and print partner validation	Compelling concept. Physical fulfillment complexity requires operational experience PM Dev does not yet have. Print partner validation is a prerequisite — must happen before any code is written. Sequence after at least two shipped software products with paying users.	MEDIUM (with partner)
6	Project Safehouse (House Fax)	P4 — after discovery pass completed	Large addressable market. Requires data layer scoping and user interviews before the project can be properly specced. TBD pros/cons must be resolved. Subscription + data aggregation is P4 complexity.	MEDIUM (post-discovery)
7	Project SSA (Stay Sharp Academy)	P4–P5 — requires content partner	High revenue ceiling. Not a solopreneur solo-build without a content partner. B2B sales motion is premature until PM Dev has 3+ shipped products and industry credibility. Sequence with a co-founder or content partnership in place.	LOW (solo)
8	Project Star Search (Find My Voice)	P3–P4 — as Learning project only	Reclassify from revenue project to Learning project. Audio ML integration is a valuable technical skill demonstration. Revenue model does not work. Remove from A&M; revenue list.	MEDIUM (Learning only)

Defer	Project QAM (Mission Smith)	P5+ — requires enterprise partnerships	Highest complexity. Requires retailer API partnerships before launch. Not a solopreneur build at any early phase. Maintain as long-term concept. Do not sequence in current roadmap.	LOW (not now)
-------	--------------------------------	--	--	---------------

5 · Bootcamp Project Selection — Up Coast Leaders

Up Coast Leaders 'From Passion to Product' runs June 1 – July 6, 2026. Six weeks, 8–12 hours per week, 9 live classes. The bootcamp follows a fixed weekly sequence: Week 1 — online research / user needs foundation, Week 2 — user interviews, Week 3 — competitive analysis, Week 4 — solution shaping, Week 5 — feature roadmap / tech stack decisions, Week 6 — launch planning. This maps directly to PMD Phases 1–8.

The bootcamp requires a real product idea, real user interviews, and a complete strategy package by Week 6. The project must be scoped to produce meaningful research output within the accelerated timeline — not built, but strategized end-to-end.

Candidate	Research Access	Scope Fit	PMD Alignment	Verdict
Project Pivot Point (Resume Builder)	Cohort = built-in interview subjects. Week 1-2 research access is immediate and high quality. Both user personas (job seeker + recruiter) are reachable.	Perfectly scoped. The strategy deliverable (not the build) fits 6 weeks. Week 5 feature roadmap exercise is identical to PMD Phase 4.	Dogfoods PMD System. Overlaps P1 Kickoff. Content strategy writes itself. Dual-output: bootcamp artifact + PMD P1 North Star Document.	RECOMMENDED
Project Tip Jar (Article Tip Jar)	Author interviews require outreach outside the cohort. Reader research requires a separate recruiting effort. Week 2 timeline is too short for two-sided research.	Two-sided marketplace scope exceeds 6-week bootcamp runway for proper validation. One side will be under-researched.	No PMD system dogfooding. UX model requires redesign before research is meaningful.	NOT RECOMMENDED
New project: AcumenMerit.com (Professional Services Site)	A&M; itself is the client and user. Internal interviews are immediately accessible. Target audience (prospective clients) can be identified via LinkedIn.	Low-complexity scope — appropriate for bootcamp deliverable. Strategy output directly feeds P1 or P2 build.	Produces a real client brief. Demonstrates B2B product thinking. Directly supports A&M; relationship.	VIABLE ALTERNATIVE

Project Pivot Point is the bootcamp project. The rationale is decisive:

#	Rationale
1	The bootcamp cohort IS the user research pool. Week 1–2 interviews require no outreach — the subjects are in the same Zoom room.
2	The bootcamp strategy deliverable and the PMD P1 North Star Document are the same artifact viewed from two angles. One effort, two outputs.
3	PM Dev is the primary user (dogfooding). The product is a tool PM Dev will immediately use for every job application from P1 forward.
4	The competitive landscape (Resume.io, Teal, Rezi, etc.) is large enough to produce a rich Week 3 competitive analysis exercise.
5	Week 5 feature roadmap + tech stack decisions feed directly into PMD Phase 4 (Roadmap) and Phase 5 (PRD). The bootcamp does the PM discovery work that P1 would do anyway — faster and with structured peer feedback.

6	The build-in-public content angle is strongest here. "I built the tool that got me hired" is a Tier-3 case study that every evaluator will read.
---	--

6 · Roadmap Impact Assessment

The bootcamp selection and A&M; project sequencing have the following impacts on Artifact #18 — Project Roadmap Architecture v2.1. These are proposed amendments — final sequencing decisions are locked in Session 10 discussion and recorded in PMD_DECISION_LOG.md.

Item	Current State	Proposed Change	Decision Log Category
P1 project identity	TBD — not yet selected	Project Pivot Point (Resume Builder) — confirmed as P1. Bootcamp research phase runs in parallel with P1 Phase 1–3.	Roadmap & Sequencing
Bootcamp integration	Not in roadmap	Up Coast Leaders bootcamp (June 1 – July 6) runs concurrently with P1 Phases 1–3. Bootcamp strategy deliverable = P1 North Star Document research input. No separate roadmap slot needed.	Roadmap & Sequencing
A&M; Project 1	AcumenMerit.com — High priority, not yet slotted	Insert as P1 parallel track or P2 project. Low complexity. No dependency on bootcamp completion. Can begin design phase while P1 (Pivot Point) is in Phase 1 research.	Roadmap & Sequencing
A&M; Project 2	Not in roadmap	Project Isogram — sequence at P2 after Pivot Point ships. Single-player MVP only. Revenue model redesign required before kickoff.	Roadmap & Sequencing
A&M; Project 3	Not in roadmap	Project DoH — sequence at P2–P3. Tournament signup MVP. Club buy-in required before merchandise layer.	Roadmap & Sequencing
Deferred projects	Not in roadmap	TOYKs, Tip Jar, Safehouse — P3–P4. SSA, QAM, Star Search — P4–P5 or reclassify. None enter the active roadmap until prerequisites are met.	Roadmap & Sequencing
Full launch trigger	P0 v2 + 3 portfolio projects + 180 days from May 2026	No change. Project Pivot Point is Portfolio-classified and counts as Portfolio Project 1. Timeline: Pivot Point live + two more portfolio projects before full launch.	Governance

7 · Locked Decisions — Carry Forward

Decision	Detail
PDF table cell pattern	All cells wrapped in Paragraph via P() helper. VALIGN TOP. Header rows bold white with amber underline. Never plain strings.
American English	Enforced from Session 09 forward. Color, behavior, recognize, analyze.
Column header word-wrap	Headers sized to avoid mid-word wrapping. Break only between words or not at all.
WCAG 2.2 Level AA	Non-negotiable. FR-09. All portfolio projects. Never deferred.
Build approach	HTML/CSS/JS → React → Full-stack. Claude Code primary from P1 forward.
Draft-first protocol	Active from P1. User drafts key artifacts first. Coach critiques and refines second.

Kickoff protocol	5 steps before Phase 1 of every project. North Star Document locked first.
Portfolio Projects inside phases	Approximately two-thirds through a phase. Not after phase close. Not the last project.
Phase Retro trigger	Fires when phase project list is exhausted. Self-correction loop — can extend and re-fire.
Portfolio Readiness Assessment	Fires before Kickoff Protocol for every Portfolio Project. All five gates must pass.
Decision Log — dual recording	Phase Retro locked decisions recorded in both retro PDF and PMD_DECISION_LOG.md.
Recall schedule	Reading Tracker: 3-10-20-30-45-60-90 day intervals. Pass advances. Fail repeats.
Content strategy	Tier 1 every project. Tier 2 every phase group close. Tier 3 every portfolio milestone.
Full launch trigger	P0 v2 complete + 3 portfolio projects live. Hard deadline: 180 days from May 2026.
Confidence score	Current: 1.0/10. Target post-P1: 4–5/10. Scored honestly, not aspirationally.
A&M; engagement framework	PROPOSED: Written mutual understanding before P1 — scope protocol, PMD classification authority, WCAG standard, attribution rights, time allocation, sunset condition. Confirm and lock at Session 10.

8 · Open Items — All Active

Item	Detail	When	Priority
docs/current/ population	File Artifacts #23 v1.1 through #26 and Session 09 Summary to docs/current/. Move prior versions to docs/archive/.	Before P1	High
NOTES.md update	Update repository NOTES.md with all Session 09 completions and open items.	Before P1	Medium
PMD_Sentiment_Data.json — seed	Create and populate with P0 entry using v1.1 schema. Commit to repo root.	Before P1	High
PMD_Reading_Data.json — create	Create empty file with schema_version 1.0 and empty books array. Commit to repo root. Populate BOOK-001 when first book is selected.	Before P1	Medium
A&M; engagement framework	Document written mutual understanding covering scope protocol, PMD classification authority, WCAG standard, attribution rights, time allocation per week, and arrangement sunset condition.	Before P1	High
Bootcamp enrollment confirmed	Confirm enrollment in Up Coast Leaders 'From Passion to Product.' June 1 – July 6. Mon/Wed 5:30–8:00pm PST.	Immediately	High
Project Pivot Point — bootcamp research plan	Prepare Week 1–2 interview guide targeting bootcamp cohort as user research subjects. Identify both user personas: job seeker (self) + hiring evaluator. Draft 5–7 interview questions before June 1.	Before June 1	High
Resume 22a + 22b	Formatting and personal data deferred. Revisit after P1 completes.	Post-P1	Low
Clarity–GA4 connection	Connect Microsoft Clarity property to GA4 for combined reporting.	Ongoing	Medium

Footer email	Replace hello@thepmdev.com placeholder after Google Workspace setup.	Before evaluator sharing	Medium
P1 Kickoff Protocol	Five-step Kickoff Protocol for Project Pivot Point. Runs after Session 10 agenda items are confirmed complete. North Star Document locked before Phase 1.	Session 10 / 11	High
PMD_DECISION_LOG.md update	Record Session 10 decisions: P1 = Project Pivot Point, bootcamp project = Pivot Point, A&M; sequencing decisions, engagement framework adoption.	Session 10 close	High

9 · Session 11 — Agenda (P1 Kickoff)

Session 10 is a context and strategy session. All items below are queued for Session 10 confirmation or Session 11 execution. P1 Kickoff does not begin until all Session 10 agenda items are resolved.

Item	Description	Priority
Confirm Session 10 decisions	Confirm: P1 = Project Pivot Point. Bootcamp project = Pivot Point. A&M; sequencing locked. Engagement framework adopted. All open items from Session 10 resolved.	High
P1 Kickoff — Step 1	Phase Context Brief — coach delivers before/after capability framing for P1. What skills PM Dev enters P1 with. What P1 completion unlocks.	High
P1 Kickoff — Step 2	Ignition Prompt for Project Pivot Point. Three options presented (or project confirmed from Session 10). User selects or confirms. Commercialization question answered.	High
P1 Kickoff — Steps 3–5	Project Evaluation (Stretch Fit, Stall Risk, Classification, Commercial Potential). North Star Document drafted and locked. Kickoff Checklist confirmed.	High
Bootcamp alignment check	Confirm bootcamp Week 1–2 interview plan is ready. Confirm enrollment. Confirm Slack channel joined.	High
PMD_DECISION_LOG.md	All Session 10 decisions recorded before Session 11 closes. P1 project locked. A&M; engagement framework logged.	High

10 · Resume Prompt — Paste at Start of Session 11

Copy everything between the dashed lines below and paste it as your opening message in the new chat. Attach PMD_Session10_Summary_v1.0.pdf and PMD_SKILL.md to that message.

--- I am continuing my PMD coaching journey. I have attached: PMD_Session10_Summary_v1.0.pdf and PMD_SKILL.md for context. Please confirm full context before we begin: IDENTITY System: PMD. Pseudonym: PM Dev. Statement: Where brilliant ideas become shipped products. Live URL: <https://thepmdev.com/> P0 STATUS All 9 phases complete. All 16 P0 artifacts approved. P0 officially signed off. GA4 live. Clarity installed. WCAG 2.2 AA confirmed. 1280px + 1440px passed. SESSION 09 COMPLETED Artifact #23 v1.1: Sentiment Journey Diary — six schema corrections applied. PMD_DECISION_LOG.md v1.0: System Decision Log — 6 categories, 19 founding entries. Artifact #24 v1.0: Reading Tracker — 7-interval recall, 4 acquisition types. Artifact #25 v1.0: Phase Retrospective — 7-section assessment, self-correction loop. Artifact #26 v1.0: Portfolio Readiness Assessment — 5-gate protocol. Six system additions: ALL COMPLETE. SESSION 10 COMPLETED A&M; / PM Dev relationship critiqued — 8 structural issues identified. Engagement framework proposed — confirm and lock before P1. All 9 A&M; revenue projects analyzed and individually assessed. A&M; build order sequenced — Project Pivot Point is #1. Bootcamp project selected: Project Pivot Point (Resume Builder). Bootcamp rationale: cohort = built-in user research, strategy deliverable = P1 North Star input. Roadmap impact assessed — P1 confirmed as Project Pivot Point. AcumenMerit.com — P1 parallel track or P2. Project Isogram — P2. Project DoH — P2-P3. TOYKs — P3-P4. Others deferred. SESSION 11 AGENDA — IN ORDER 1. Confirm all Session 10 decisions and open items resolved. 2. P1 Kickoff — five-step Kickoff Protocol for Project Pivot Point. 3. Bootcamp Week 1-2 interview plan confirmed and ready. 4. PMD_DECISION_LOG.md updated with all Session 10 decisions. LOCKED PATTERNS PDF table cells: always P() helper. VALIGN TOP. Never plain strings. American English: enforced. Color, behavior, analyze. Column headers: no mid-word wrapping. WCAG 2.2 AA: non-negotiable. All projects. Kickoff protocol: 5 steps before Phase 1 of every project. Portfolio Projects: inside phases, approx. two-thirds through. Draft-first: active from P1. CONFIDENCE SCORE: 1.0 / 10 (honest — no new project shipped yet) --- Attach PMD_Session10_Summary_v1.0.pdf and PMD_SKILL.md to the new chat message.
